DetailPadV0.c

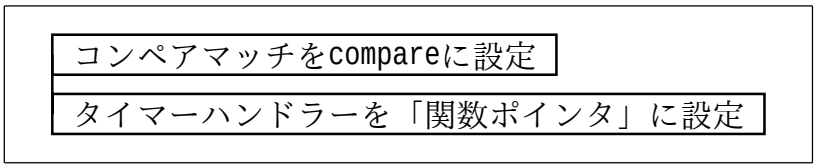

timerv *timer_get_timerv0(void)

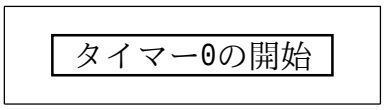

void timer0_handler(void)

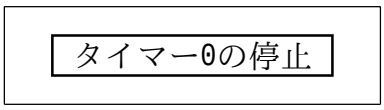

void init_timer0(int compare, 関数ポインタ)

void start_timer0(void)

void stop_timer0(void)

void motor_fwd(void)

モーター正転

void motor_rev(void)

モーター逆転

void motor_stop(void)

モーターストップ

int motor_encoder_state(void)

モーターのエンコーダー値を取得し、下位2ビットをB相A相（数値0~ 3）で返却

void number_led(int n)

数値LEDの表示制御

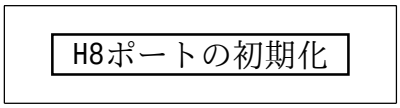

void number_led_off(void)

数値LEDの消灯

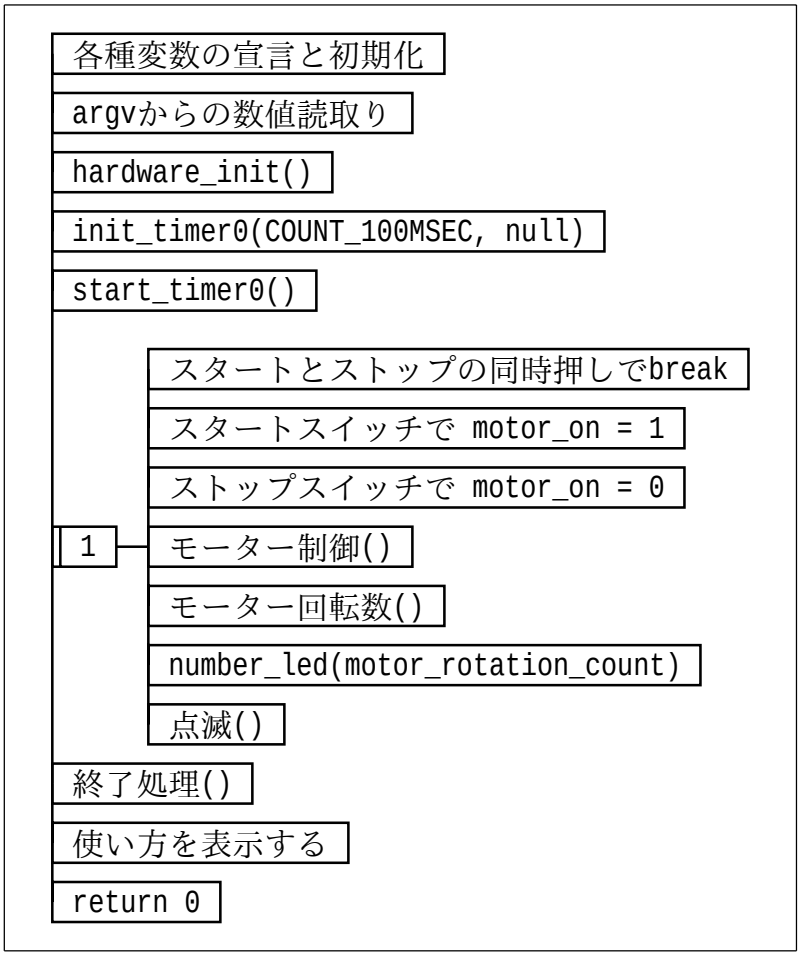

void led(int n)

LEDのbit4以外を2進数で点灯

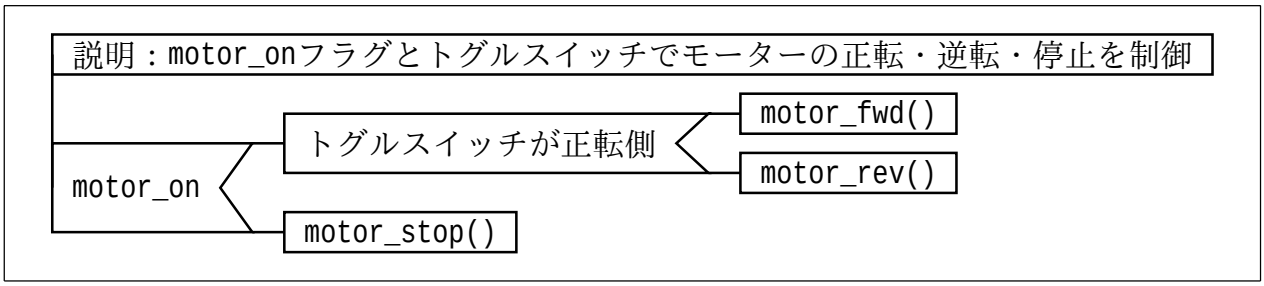

void hardware_init(void)

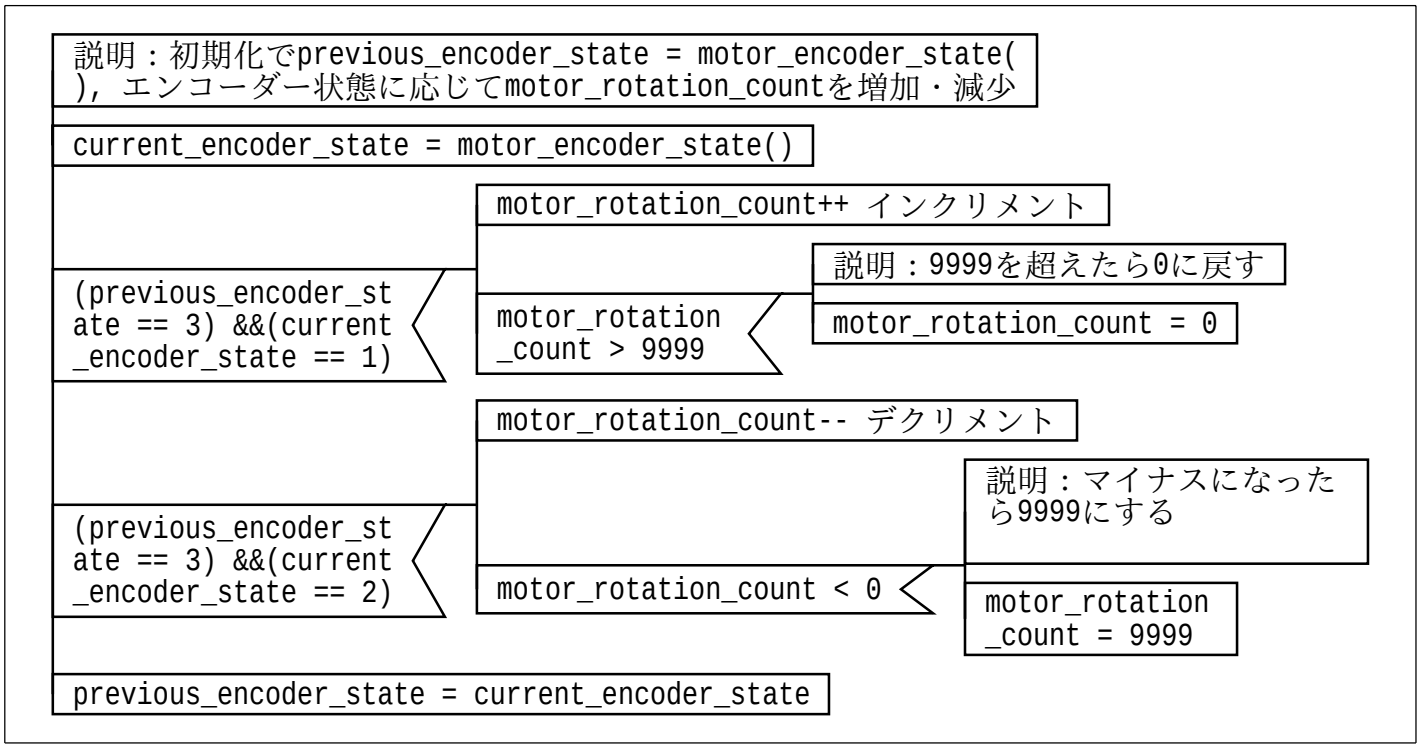

int main(void)

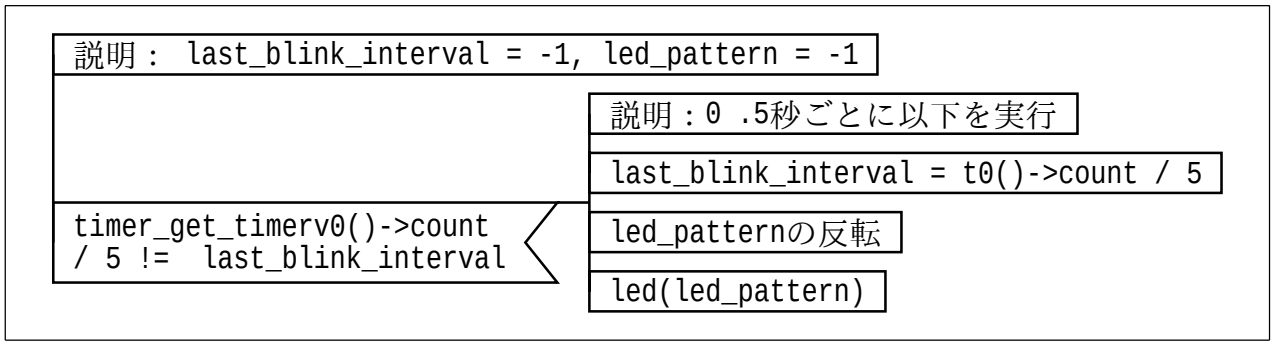

詳細 モーター制御()

詳細 モーター回転数()

詳細 点滅()

説明： last_blink_interval = -1, led_pattern = -1
説明：0 .5秒ごとに以下を実行
last_blink_interval = t0()->count / 5
timer_get_timerv0()->count / 5 != last_blink_interval
led_patternの反転
led(led_pattern)
